New Howlite Crystals

I've added a new [Howlite Update \(click here\)](#) with beautiful sharp crystals of howlite. Howlite is not a rare mineral. However, display-quality crystals of howlite are rare. To date, there is only one known locality, on the shoreline of Bras D'Or Lake, near Iona, Victoria Co., Cape Breton Island, Nova Scotia. We were pleasantly surprised to see these latest specimens, because in the past, finds have typically been quite sporadic. High quality specimens have always been hard to obtain and that seems unlikely to change in the long run - you can see why at the linked post below. This update includes some truly excellent specimens.

I thought you might like to have a glimpse to give a better sense of what is involved in collecting and preserving these howlite crystals, so I've added a short post on the site with a few photos - if you're curious, [click here](#).

Hope you enjoy!

My usual reminder - prices on the website are in Canadian dollars, which trade at a good discount these days, if you are thinking in (or used to browsing online minerals in) US dollar terms.

For all new specimens at McDougall Minerals, see [New Specimens](#).
