New Milpillas Brochantite

I've posted a small number of super new specimens in this [Milpillas Brochantite Update \(click here\)](#). These good-sized brochantite crystals from the Milpillas Mine in Sonora, Mexico, are sharp, lustrous and unusually robust for the species, which is often seen in very thin needle-like or hair-like crystals.

Hope you enjoy the specimens!

Canadian and US Dollar

The currency disparity remains significant in favour of the U.S. dollar these days. My usual reminder - prices on the website are in Canadian dollars (if you are thinking in - or used to browsing online minerals in - US dollar terms. To approximate the current US dollar prices of specimens on the website, multiply by 0.76.

For all new specimens at McDougall Minerals, see [New Specimens](#).
