Subject: New Wodginite / Tucson Report

[View this email in your browser](#)

New Wodginite from Brazil

I've posted the first of the new Tucson specimens in this [Wodginite Update \(click here\)](#). These are sharp, lustrous wodginite crystals from a small recent find in the Linopolis district, near Divino das Larajeiras, Minas Gerais, Brazil. Wodginite is not a common mineral, and it is quite difficult to acquire good crystals. The identification of these ones has been confirmed at the University of Arizona, and, along with subsequent EDS work, it has been established that of the various members of the wodginite group, they are wodginite.

Tucson 2017 Report

I've added a new post on the blog with news from [Tucson 2017 \(click here\)](#). Tucson was great again this year, and I have lots of new specimens! This report includes photographs of specimens to be posted on the website over the coming weeks.

Hope you enjoy these new posts!

Canadian and US Dollar

The currency disparity remains significant in favour of the U.S. dollar these days. My usual reminder - prices on the website are in Canadian dollars (if you are thinking in - or used to browsing online minerals in - US dollar terms).

For all new specimens at McDougall Minerals, see [New Specimens](#).
