**Subject:** Cape Minerals New Stock 23 October 2017

We have loaded a number of new and really interesting specimens from Southern Africa as well as a few new international specimens on the site. Of interest are two agates from the Skeleton Coast Namibia that demonstrate a incredible polish from years of wind and sand ablation, a few specimens from the now defunct Ysterputs deposit in Namibia as well as a number of new specimens from Tsumeb.

Note that some of the specimens are at prices well below \$10 each! Happy hunting

Regards

Cape Minerals.
