## Featured Mineral

Hemimorphite, Mexico

This month the featured mineral is hemimorphite that was collected at Mexico's famed Ojuela Mine. The name hemimorphite is from the Greek words hēmi, or "half," and morphē, meaning "form." The combined meaning "half-form" is interesting as hemimorphite has a tendency to exhibit different crystal habits at opposite ends of the same crystal.

Also available to purchase in larger display sizes.

then chose the monthly offerings tab from the drop down menu

---

## Monthly Offering

This month we have 2 offerings just in time for holiday gift giving. The first one is Axinite from a private collection that was mined during the 1980's in California. It is a rare group of calcium aluminum borate silicate minerals.

The second offering is a lovely Goniatite fossil from Morocco that is some 390 million years old. It makes for a perfect display piece.

Axinite, California

You will find these beauties under the Offerings tab section of the website.
