Subject: Last copies of my book are available too - not just minerals

John Betts - Fine Minerals

In addition to all minerals on sale, I have two remaining copies of Index to the 15 volumes of *The Mineral Collector*; March, 1894 to February, 1909

This index is four separate indexes in one volume: general subject-title index, authors index, chronological index and illustration index to over 1900 articles and 204 illustrations in the fifteen annual volumes. Now for the first time locating articles is easy and fast.

The Mineral Collector was an early magazine devoted to minerals and mineral collecting with articles by such well-known collectors as Maynard Bixby, Arthur Chamberlain, Louis Gratacap, George Kunz, Charles Pennypacker, Samuel Penfield, etc. The magazine began with Volume 1 Number 1 in March 1894 and was published monthly for the following 15 years. At the the time, it was the main journal for mineral collectors and coincided with many classic mineral discoveries like the mining at Mt. Mica, the discovery of Kunzite, etc. Complete reprinted sets of *The Mineral Collector* were available from Jay Lininger at Matrix magazine.

This index makes the entire set useful for the first time because it indexes all 15 volumes in complete list. Purchase the index here:
